

Sustainability Training Course: ISAE 3000

Online course.

Consisting of 6 three hour modules the days June 15, 16, 17, 22, 23, & 24

In-company training

Sustainability assurance has now become mainstream for those companies building their on-going success on trust and solid business relationships. Normal financial reporting and auditing alone is no longer sufficient, and companies now require important non-financial information to be subjected to independent third party professional assurance. The IAASB has issued the standard ISAE 3000 "Assurance engagements other than audits or reviews of historical financial information" for use on these occasions

This ISAE 3000 training has been specifically developed to provide the delegates with the necessary knowledge and skills to be able to apply the standard correctly. The objective of this training is that the delegates understand the assurance process and its application.

Training content

The training comprises of six modules:

- Module A:** Concepts and roles of assurance, compliance, corporate governance, sustainability, ethics and professional conduct
- Module B:** ISAE 3000 requirements
- Module C:** Introduction to the ISAE 3402
- Module D:** Evaluating misstatements and the identification and analysis of potential assurance risks
- Module E:** Procedures for controlling quality of an assurance assignment
- Module F:** Competencies for performing an ISAE 3000 assurance engagement

Modules A, B and C provide delegates with insights on the role of assurance of non-financial information and the standards ISAE 3000 and ISAE 3402.

Modules D, E and F permits delegates to take a close look at the main challenges related to assurance of non-financial information, and how to perform a quality ISAE 3000 engagement.

This highly practical training has been specifically designed for professionals interested in learning how to conduct a quality ISAE 3000 assurance process.

Training objectives

The training will enable the delegates to be able to:

- ✓ Plan and execute an effective process for assessing an organization's internal processes and performance information.
- ✓ Understand the concepts of assurance, corporate governance, ethics and code of conduct
- ✓ Evaluate the risk and describe how it is managed
- ✓ Put in place and apply quality control procedures
- ✓ Carry out an assurance engagement applying the ISAE 3000

Methodology

The training consists of a combination of lectures, practical exercises and discussions in small breakout groups. For each module there is brief assessment such as a test or a practical team exercise, in order to ensure understanding of the contents by the delegates.

To maximize learning experience, the class size is limited to a maximum of 10 delegates.

A certificate will be awarded to all delegates that successfully complete the training.

Trainer

John Scade: Founder and Managing Director, FCA, ACSAP and AA1000SES technical committee member, AccountAbility Interim Standards Board member (2011-12).

John has over 16 years' experience as a trainer on sustainability and assurance. Prior to focusing his professional career in the emerging field of sustainability and corporate responsibility, he was a financial auditor for 16 years in Big 4 auditing firms, and latterly occupied senior management positions in major international corporations.
